No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention describes a new isolated porcine circovirus Type II (PCVII), obtained from postweaning multisystemic wasting syndromeaffected pigs. AAX83754 to AAX83757 represent PCVII nucleotide sequences. AAX434934 represent PCVII open reading frame (ORF) proteins (N.B. the PCVII ORFS given in Fig 2A to Fig 2B do not correspond exactly with the PCVII ORFS given in Fig 3A to Fig 3D). The PCVII polypeptides can be used for treating or preventing PCVII infection in vertebrates. The products can also be used to detect the PCVII
                                                                                                                     Porcine circovirus type II; PCVII; PCVI; pig; infection; vaccine; postweaning multisystemic wasting syndrome virus; diagnosis; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                     The present invention relates to the use of porcine circovirus-2 (PCV-2) immunogen to formulate a vaccine composition to prevent or treat pigs against myocarditis and/or abortion and/or intrauterine infection and/or post-weaning, multisystemic wasting syndrome and other pathological sequalse associated with PCV-2. The present sequence is a DNA fragment of a strain of PCV, which was used in the present invention. (Updated on 06-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the use of porcine circovirus-2 (PCV-2) immunogen to formulate a vaccine composition to prevent or treat pigs against myocarditis and/or abortion and/or intrauterine infection and/or post-weaning, multisystemic wasting syndrome and other pathological sequalse associated with PCV-2. The present sequence is a DNA fragment of a strain of PCV, which was used in the present invention. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of porcine circovirus-2 immunogen to formulate a vaccine composition to treat pigs against myocarditis, abortion, intrauterine infection and/or post-weaning, multisystemic wasting syndrome associated with PCV-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACCAGCGCACTTCGGCAGCGGCACCTCGGCAGCACCTCAGCAGCAACATGCCCAGCA

The present sequence represents the complete genome of porcine circovirus 2 (PCV2). This sequence comprises two open reading frames (ORFs). PCV2 is cultured using the method of the invention. The specification describes a method for culturing a mammalian circovirus. The method comprises obtaining mammalian cells are permissive for mammalian dircovirus El function, where the cells are permissive for mammalian dircovirus El function, introducing the mammalian circovirus genome, or its portion, into the mammalian cells, and culturing the mammalian cells under conditions suitable for replication of the mammalian circovirus. The method of the invention is useful for culturing circovirus in mammalian cells, expressing mammalian adenovirus El function for molecular biology, and biotechnology purposes. (Updated on 27-0CT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a new isolated porcine circovirus Type II (PCVII), obtained from postweaning multisystemic wasting syndrome-affected pigs. AAX83754 to AAX83757 represent PCVII nucleotide sequences. AAX2429 to AAX44934 represent PCVII open reading frame (ORF) proteins with the PCVII ORFs given in Fig 2A to Fig 2B do not correspond exactly with the PCVII ORFs given in Fig 3A to Fig 3D). The PCVII polypeptides can be used for treating or preventing PCVII infection in vertebrates. The products can also be used to detect the PCVII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1681 GAIGGCIGCGGGGGCGGIGICIICTICIGCGGIAACGCCITCGAIACGICAIAGCIG 1740

                                                                                                                                                                                                                                                                                                                                                                                                                827
syndrome). PCV (attenuated or inactivated), polypeptides derived from it, and vectors that express these polypeptides are all useful in vaccines, suitable for administration to adult or young pigs, or to pregnant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV specific antibodies, while antibodies raised against the polypeptides can be used to detect antigens, in any usual immunoassay format

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              780
                The present sequence represents the nucleotide sequence of PCV isolate Imp1011-48121. The specification describes a preparation of type II porcine circovirus (PCV), which is particularly isolated from a lesion, from a pig with symptoms of PMMS (porcine multisystemic wasting syndrome). PCV (attenuated or inactivated), polypeptides derived from it, and vectors that express these polypeptides are all useful in vaccines, suitable for administration to adult or young pigs, or to prepant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV-specific antibodies, while antibodies raised against the polypeptides can be used to detect antigens, in any usual immunoassay format
                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540

                                                                                                                                                                                                                                                       9
                                             antigen for
                                                                                               The invention provides a novel antigenic preparation directed against porcine multisystemic wasting syndrome (PMWS) that comprises porcine circovirus (PCV) antigen and porcine parvovirus (PPV) antigen. The PCV antigens and PPV antigens can be used for vaccination against PMWS. The present sequence represents the DNA sequence of PCV IMp.1011-48121

                                                                                                                                                                                     The present invention relates to the use of porcine circovirus-2 (PCV-2) immunogen to formulate a vaccine composition to prevent or treat pigs against myocarditis and/or abortion and/or intrauterine infection and/or post-weaning, multisystemic wasting syndrome and other pathological sequalse associated with PCV-2. The present sequence is a DNA fragment of a strain of PCV, which was used in the present invention. (Updated on 06-AUG-2003 to correct OS field.)

                                                                                                                                                                                                           The present sequence represents the nucleotide sequence of PCV isolate Imp1011-48285. The specification describes a preparation of type II porcine circovirus (PCV), which is particularly isolated from a lesion, from a pig with symptoms of PMMS (porcine multisystemic wasting syndrome). PCV (attenuated or inactivated), polypetides derived from it, and vectors that express these polypeptides are all useful in vaccines, suitable for administration to adult or young pigs, or to pregnant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV-specific antibodies, while antibodies raised against the polypeptides can be used to detect antigens, in any usual immunoassay format

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the nucleotide sequence of PCV isolate Impl011-48285. The specification describes a preparation of type II porcine circovirus (PCV), which is particularly isolated from a lesion, from a pig with symptoms of PMMS (porcine multisystemic wasting syndrome). PCV (attenuated or inactivated), polypeptides derived from it, and vectors that express these polypeptides are all useful in vaccines, suitable for administration to adult or young pigs, or to pregnant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV specific antibodies, while antibodies raised against the polypeptides can be used to detect antigens, in any usual immunoassay format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                         for
                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides a novel antigenic preparation directed against porcine multisystemic wasting syndrome (PWMS) that comprises porcine circovirus (PCV) antigen and porcine parvovirus (PPV) antigen. The PCV antigens and PPV antigens can be used for vaccination against PMMS. The present sequence represents the DNA sequence of PCV Imp.1011-48285.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the use of porcine circovirus-2 (PCV-2) immunogen to formulate a vaccine composition to prevent or treat pigs against myocarditis and/or abortion and/or intrauterine infection and/or post weaning, multisystemic wasting syndrome and other pathological sequalse associated with PCV-2. The present sequence is a DNA fragment of a strain of PCV, which was used in the present invention. (Updated on 06-AUG-2003 to correct OS field.)

The specification describes a preparation of type II porcine circovitus (PCV), which is particularly isolated from a lesion, from a pig with symptoms of PMMS (porcine multisystemic wasting syndrome). PCV (attenuated or inactivated), polypeptides derived from it, and vectors administration to adult to young pigs, or to pregnant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV-specific antibodies, while antibodies raised against the polypeptides can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             407

The specification describes a preparation of type II porcine circovirus (PCV), which is particularly isolated from a lesion, from a pig with symptoms of PMMS (porcine multisystemic wasting syndrome). PCV (attenuated or inactivated), polypeptides derived from it, and vectors administration to adult or young pigs, or to pregnant sows (for passive immunization of their offspring). DNA isolated from PCV is used for in vivo or in vitro expression of viral polypeptides, also as probes or primers for diagnosis in usual hybridization or amplification assays. These polypeptides may also be used diagnostically to detect PCV-specific antibodies, while antibodies raised against the polypeptides can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
